

SATURDAY 13TH OCTOBER 2018 // HARTPURY COLLEGE, GLOUCESTER, UK

Our annual equine sports science seminar facilitates the sharing of some of the latest evidence and research currently within equine sports science and medicine. This seminar provides some of the latest thinking and approaches from world leading researchers associated with the management of the horse from a veterinary, therapy and performance perspective.

PROFESSOR LARS ROEPSTORFF PRESENTING:

- How surface properties affect the horse
- Measure lameness and gait quality – how do you do that?
- Future possibilities in objective analysis of sports performance
- What are the athletic requirements of riders and how to train them?

DR. RACHEL MURRAY PRESENTING:

- Updates on proximal suspensory desmopathy and proximal metacarpal/proximal metatarsal pain.
- Muscle development for rehabilitation and performance: what are the options?
- Repetitive overload injuries in different sports: how do we prevent them?

Tickets £110.00 incl CPD Certificates
